

Affiliation is sealed:

Reimelt is now called Zeppelin.

**The affiliation of the Reimelt Henschel GmbH to the Zeppelin Group, Friedrichshafen, will now be clearly recognizable by the new name and corporate presence.**

### **Friedrichshafen/Rödermark, June 2010.**

There have been many developments since the official integration last year. Because both companies - Zeppelin as well as Reimelt – are counted among the global leaders in system construction in raw material handling, synergies were determined, subsidiaries were merged, the business divisions were defined and now, last but not least, the company names have been changed: since June 1<sup>st</sup> 2010, the Reimelt Henschel GmbH operates under the name of Zeppelin Reimelt GmbH and the Zeppelin Silos & Systems GmbH is renamed as Zeppelin Systems GmbH.

„With this step, it should be made clear that Reimelt now belongs to Zeppelin Systems GmbH, a company which has grown to over 1,200 employees and a business volume of approximately 300 million euro“, stated Zeppelin CEO Rochus Hofmann. „On the other hand“, said Hans-Jürgen Sussann, CEO of Zeppelin Reimelt GmbH: „We did not want to renounce the established brand name „Reimelt“, which has existed for over 125 years and which stands just as much for quality, reliability and improvement as the „Zeppelin“ name“. Rochus Hofmann is satisfied: „We have optimally positioned our company for the future to meet the challenges of the international market's demands. By means of this integration, the customers of the Zeppelin Reimelt GmbH can continue to expect the best quality, the most modern technology and extensive service.“

The Zeppelin Reimelt GmbH plans, develops, manufactures and installs process-technological systems for the handling of powdered, viscous and liquid raw materials as well as mixers for the food, beverage, pharmaceutical, cosmetics, plastics processing and chemical industries.

Fat-frying systems for the food industry and compounding systems for the plastics processing and chemical industries are also included in the Zeppelin Reimelt GmbH portfolio.

High quality key components for process technology are the basis for smooth operating and therefore economical production processes. Due to this fact, Zeppelin Reimelt GmbH manufactures their own components themselves for the rigorous requirements of industrial production.

Just as there is a great variety of industry branches, there is also an equally great variety of corresponding requirements. In order to be able to exactly satisfy these varying needs, Zeppelin Reimelt GmbH will continue to have its individual business divisions which will, with immediate effect, operate under new names:

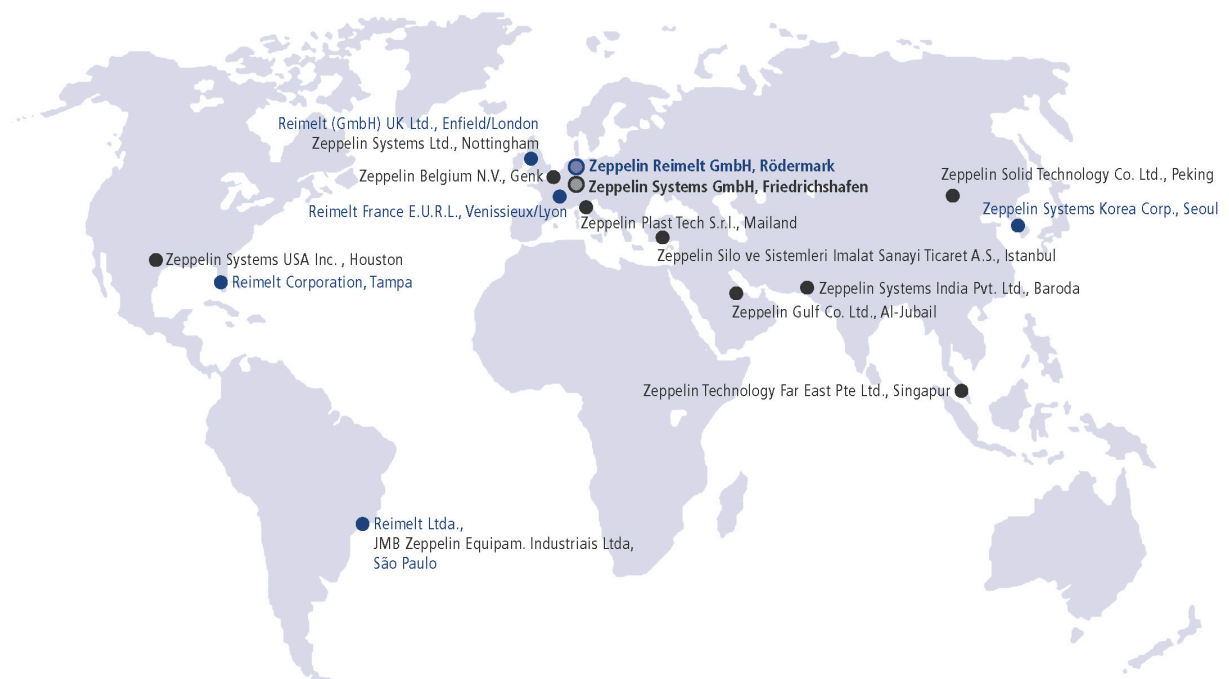

**Zeppelin Reimelt GmbH, Food Technology, Rödermark**  
*Systems and components for the bakery, food and confectionery industries*

**Zeppelin Reimelt GmbH, Liquids Processing, Landau**  
*Systems and components for the beverage, food, pharmaceutical and cosmetics industries*

**Zeppelin Reimelt GmbH, Henschel Mixing Technology, Kassel**  
*Systems and components for the plastics processing and chemical industries*

The extensive Zeppelin Reimelt GmbH know-how means system concepts without interfaces. The development of integrated system solutions is also necessary for a smoothly operating process automation.

As a globally active company with locations in all of the worlds important commercial centers and with production facilities in Germany, Belgium, Turkey, Saudi Arabia, Brazil and China, Zeppelin Reimelt can ensure that our customers always have the most modern technology – innovative and dependable for their maximum financial success.
